

JEREMY LAVIGNE

Web Developer Junior

Always **eager** for new things, programming will be the right environment to express my logical sense and **rigour**.

I can see **logic** where there is not, can handle anything new with no fear and am definitely a **good invest** for the future.

I master HTML-CSS-**JS** basics, feel comfortable using more advanced features (**React**, Redux, Webpack, Jest, Node.js...) and technics (Atomic design, **Web scraping**, Test-Driven Development).
